SUMMARY

Results-driven Full-Stack & MERN Developer with a solid foundation in **Computer Science** and hands-on experience architecting **high-performance web and desktop applications**. Proficient in building **scalable backend RESTful architectures**, managing **relational and non-relational databases**, and creating highly **interactive, state-managed user interfaces**. Strong advocate for **clean code**, **service-repository design patterns**, and fluid **3D/AI-integrated web experiences**.

EDUCATION

Bachelors of Computer Science, *University of Education* 11/2022 – 08/2026
Key Courses: Object-Oriented Programming, Data Structures & Algorithms, Operating Systems, Theory of Automata, Artificial Intelligence

Intermediate in Computer Science, *Punjab Group of Colleges* 08/2019 – 05/2021

SKILLS

Frontend Development

React.js, Next.js,
JavaScript (ES6+),
HTML5, CSS3, Tailwind
CSS

Tools & Version Control

Git, GitHub, Visual Studio
Code, Figma

Backend & Databases

Node.js, Express.js,
MongoDB, Prisma,
Supabase, SQLite, REST
APIs

State Management & Animation

Zustand, Redux Toolkit,
Framer Motion, GSAP,
Three.js (R3F)

PROJECTS

Library Management System, 01/2026 – Present
Electron, React, Node.js, Express, MySQL, Sequelize

- **Built a cross-platform desktop app** from the ground up to handle everything from **book tracking** to **member workflows**.
- **Designed** a robust backend using a **Service-Repository pattern**, making the code easier to **maintain and scale** as the project grows.
- **Implemented** secure user logins with **JWT** and created specific **Role-Based Access Control (RBAC)** to keep sensitive admin data safe.
- **Connected** a **MySQL** database via **Sequelize ORM** to generate **real-time library stats** and helpful **dashboard analytics**.

Brainwave AI SaaS Platform, 04/2026 – 05/2026
Next.js, Tailwind CSS, Zustand, Framer Motion

- **Developed** a high-end **AI SaaS landing page** with complex, modern **bento-box layouts** that look great on any screen size.
- **Coded** a custom **AI Prompt Lab** and a user **dashboard**, using **Zustand** to keep the app's data in sync without slowing down performance.
- **Added** smooth, natural-feeling animations and scroll effects using **Framer Motion** to give the site a premium feel.

iPhone 3D Interactive Showcase, *React, Three.js (R3F), GSAP* 02/2026 – 03/2026

- **Engineered** an interactive 3D website using **React Three Fiber (R3F)** that lets users explore a **3D iPhone model** in real-time.
- **Created** a "component explosion" effect where parts of the phone separate as you scroll, revealing detailed **technical annotations** via **GSAP ScrollTrigger**.
- **Optimized** the 3D rendering loops so it stays fast and responsive on mobile devices, maintaining a steady **60 FPS** before deploying to **Vercel**.
