Featured Engineering Projects

Grounded, real-world implementations demonstrating full architectural depth from raw hardware inference to interactive end-user experiences.

FLASHPIP ARCHITECTURE

🟢 Live System

SYS_ID: 2026-VOICE-EVAL

Adaptive Multimodal AI Interview & Candidate Assessment System

A real-time, bidirectional voice-driven AI evaluation engine. Automatically parses JD requirements, conducts low-latency technical interviews with dynamic follow-up questioning based on candidate responses, and compiles objective recruiter scoring dossiers.

SYSTEM EXECUTION PIPELINE

Job Description → AI Screening → Eligibility Gate → Voice Interview (LiveKit) → Adaptive Logic Engine → Recruiter Dashboard

🔊 Voice Interview Session Simulator

🟢 WEBRTC AUDIO SUBSYSTEM

STREAM: 16-bit PCM @ 24kHz • VAD: ACTIVE

AI INTERVIEWER (VOICE AGENT):
"You mentioned implementing multi-head attention in PyTorch. How did you handle causal masking for autoregressive generation?"

CANDIDATE RESPONSE STREAM:
"We applied an upper-triangular matrix with -inf before the softmax step to prevent tokens from attending to subsequent indices..."

🔍 Adaptive Depth Mechanism
Candidate's response triggers dynamic depth escalation. The AI shifts from foundational syntax probing to architecture trade-offs automatically.

Architecture Overview

Built on an asynchronous Python backend using FastAPI, LiveKit for low-latency WebRTC streaming, and Pipecat to bridge Whisper STT, Gemini Flash / GPT-4o for evaluation, and Cartesia TTS.

Engineering Chronicle

Intensive institutional technical foundations and iterative milestones across modern artificial intelligence paradigms.

○ INTENSIVE RESIDENCY

Python + AI Bootcamp — PureLogics x TopSkills

Core Curriculum & Research

Rigorous, hands-on engineering track mastering the entire machine learning and generative artificial intelligence workflow—from mathematical foundations to production multi-agent systems.

TRACK A: ALGORITHMIC ML & NLP

Deep dive into Scikit-Learn, Pandas, NumPy, Deep Learning fundamentals with PyTorch, BERT/TS transformers, and custom text tokenization.

TRACK B: GENERATIVE AI & RAG

Prompt optimization engineering, vector database architectures, multi-hop semantic retrieval, embedding models, and grounded citations.

TRACK C: AGENTIC AI & MCP

LangChain, LangGraph stateful loops, CrewAI collaborative agent orchestration, semantic memory layers, NeMo guardrails, and Model Context Protocol.

Python 3.12 Data Analysis Transformers Hugging Face Stable Diffusion Multi-Agent Systems Model Context Protocol

CONTRIBUTIONS IN COMPUTATIONAL GRAPH

Less More

voice-eval-interviewer

Public

LiveKit & Pipecat orchestration engine for low-latency adaptive AI technical voice assessment.

Python FastAPI WebRTC

langgraph-multi-agent-researcher

Public

Cyclic state graph implementation executing multi-hop domain research with dynamic verification tools.

Python LangGraph Chroma

// 07 • INITIATE CONTACT

Let's Build Something Intelligent.

Whether architecting scalable foundation model inference, crafting multi-agent systems, or deploying real-time voice applications, I am ready to collaborate.
